

Personalized Medicine: A Work in Progress

Dr. Everardo Saad, Medical Director of IDDI contributed to an article on Personalized Medicine published in the June issue of PharmaVOICE, both digital and printed.

“Advances in big-data analytics are increasingly being employed to extract targeted information with the potential to drive life-sciences research and clinical practice closer to the goal of personalized and precision medicine.

The advent of big data is transforming both life-sciences research and the practice of healthcare. In recent years, advances in the collection of molecular, clinical, and patient data have progressed at warp speed, giving rise to both breakthroughs and challenges in analyzing and interpreting this information for use in personalized and precision medicine.”

Carolyn Gretton, PharmaVOICE June 2021.
